Practical-13

PHP JSON API and AJAX/Fetch-Based CRUD without Page Reload

Theory

1. Do PHP endpoints return valid JSON responses?

Answer: Yes, PHP endpoints return valid JSON responses.

2. Are GET and POST requests handled properly?

Answer: Yes, GET and POST requests are used to retrieve and manage data.

3. Are loading, success, and error states shown on the frontend?

Answer: Yes, appropriate messages are displayed to the user.

4. Is input validation performed before database operations?

Answer :- Yes, input validation is performed before saving or updating data.

A. GitHub Repository Link:

https://github.com/krish-301/Student-Hub-Portal

B. Challenges Faced:

I faced difficulties in connecting Fetch API with PHP and handling JSON responses. I also had some issues with input validation and displaying messages without reloading the page.

C.Learning Outcome:-

I learned to use PHP JSON APIs and Fetch API to perform CRUD operations without reloading the webpage.
