

## Practical 6

### Practical Title: Rendering External JSON Data using Fetch API, Search and Filter

Display event lists, student profiles, notices, or FAQs from external JSON files using Fetch API. Implement dynamic rendering, search, filter, sorting, and pagination.

#### Theory

1. How is JSON fetched, parsed, and rendered?
2. Which array methods are used for search, filter, sort, and pagination?
3. How are loading and error states handled?
4. How is modularity maintained in JavaScript files?

**GitHub Repository Link:** <https://github.com/krish-301/Student-Hub-Portal>

#### Output:-

**Challenge Faced:**

Handling JSON fetching, parsing, and dynamically displaying data can be challenging. Implementing search, filter, sorting, pagination, and error handling requires careful JavaScript logic.

**Learning Outcome:**

Students will learn to fetch and process external JSON data using the Fetch API. They will develop dynamic, reusable views with search, filtering, sorting, and pagination.

**Faculty Remarks:**
