

Practical-3

Practical Title: Responsive UI Design using CSS Grid, Flexbox, and Bootstrap/Tailwind

Design responsive layouts for Home, About, Registration, Dashboard, and Events pages using CSS Grid and Flexbox. Optional to use CSS framework such as Bootstrap or Tailwind. Ensure mobile-first responsiveness.

Theory

1. How does the layout adapt for mobile, tablet, and desktop screens?

Answer: The layout is responsive. On mobile, the content is shown in a single column. On tablets, the sections adjust with proper spacing. On desktop, all sections use the available screen space to give a better view.

2. Which layout technique is used and why?

Answer: I am Using Vscod For CSS for Reswonponsive UI Design For All Pages.

3. Which layout technique is used and why?

Answer: I used clear fonts, proper spacing, and colors with good contrast so that the text is easy to read and the website looks clean.

4. Is the framework used consistently without unnecessary inline CSS?

Answer: Yes. I used the framework consistently and kept the styling in external CSS files. I avoided unnecessary inline CSS to keep the code organized and easy to maintain.

A. Result:-

CSS Code:-

```
/* Reset */
* {
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

/* Body */
body {
  font-family: Arial, Helvetica, sans-serif;
```

```
background-color: #f4f7fb;
color: #333;
line-height: 1.6;
}

/* Header */
header {
  background: #2c3e50;
